It's too bad this book came out ahead of "Head Rush Ajax", because after reading that book, this book seems much better. It is not meant to be a tutorial on Ajax, but just a supplemental text full of possibly helpful code. There are detailed descriptions of each hack, but I think you'll be lost if you don't already know XML, Javascript, and DOM pretty well. To me, the most useful hacks were in Chapter 4, where there are hacks that explore the Google Maps, Yahoo! Maps, and GeoURL APIs, and combine them, and also where you learn to use cookies in the Ajax environment. I also liked reading chapter 8 on script.aculo.us, and learning about how easily visual effects could be incorporated into Ajax applications. If you are not sure this book is for you, all of the code examples are available in a zipfile at the book's webpage on the publisher's site. I recommend you read "Head Rush Ajax" first, then come back to this book for some interesting extras. I notice that does not list the table of contents, so I do that here:

- Chapter 1. Ajax Basics
- Hack 1. Detect Browser Compatibility with the Request Object
- Hack 2. Use the Request Object to POST Data to the Server
- Hack 3. Use Your Own Library for XMLHttpRequest
- Hack 4. Receive Data as XML
- Hack 5. Get Plain Old Strings
- Hack 6. Receive Data as a Number
- Hack 7. Receive Data in JSON Format
- Hack 8. Handle Request Object Errors
- Hack 9. Dig into the HTTP Response
- Hack 10. Generate a Styled Message with a CSS File
- Hack 11. Generate a Styled User Message on the Fly

Chapter 2. Web Forms

- Hack 12. Submit Text Field or textarea Values to the Server Without a Browser Refresh
- Hack 13. Create a Form with a Dynamic Number of Fields
