## Synopsis

Conhecer e utilizar Linux é essencial. Não é apenas para um administrador de sistemas, mas também para o desenvolvedor web, para o administrador de banco de dados ou o usuário mais engajado de qualquer sistema vindo do Unix, como o Mac OSX. Daniel Romero parte desde a instalação do Ubuntu, utiliza de comandos básicos, conhecimento do sistema de diretórios para depois atacar processos, configuração de pacotes como Apache, PHP, Java e MySQL, para depois chegar na criação de seus próprios scripts. Num linguajar fácil e passo a passo, você vai perder o medo de encarar a linha de comando e os terminais, para tirar o máximo de proveito desse onipresente sistema operacional.
